Project #6 - Geometric Modeling

Video Link: <https://www.loom.com/share/33f142b6313f49c98e8e24d039326465>

Description: For this project I took the Bezier curves approach. I made my design somewhat resemble a petal structure with each petal having an alternating cycle of going up or down. With this, I ended up doing 8 curves. Due to so few curves I just went ahead and selected the primary points manually around a circle. If I was doing more curves I likely would have done an equation but this works fine for our purposes. For further information please listen to the video narration.
